

Pilot Plants of the KAHL Group for Ensuring High Quality

Innovative products
for new markets,
product development,
formula development,
feasibility studies,
proven process technology,
process guarantee,
and scale-up

Professional Implementation of Innovations and Proven Process Technology

Our research and development departments will help you to optimise your products and processes in our pilot plants, taking into account market requirements, product trends, process development, and feasibility studies. We offer decades of experience in test engineering.

We train your operators in-house to prepare them in the best possible way for the operation of your plant.

Bespoke tests can be carried out with a few grams or several tons of product in our laboratory and pilot plant according to your particular requirements. Process know-how, machines and plants as well as modern analysis

instruments for quality assurance are at your disposal. Furthermore, we co-operate closely with renowned institutes. On the basis of the obtained results, a scale-up can be realised and individual plant designs can be prepared taking into account economic efficiency and the use of different raw materials.

We are happy to assist you in the context of further tests or to provide you with product samples for testing individual applications. Some of our machines are available for on-site tests or your own laboratory tests.

As a matter of course, we ensure utmost confidentiality towards our customers and prospective buyers.

The extensive tests include:

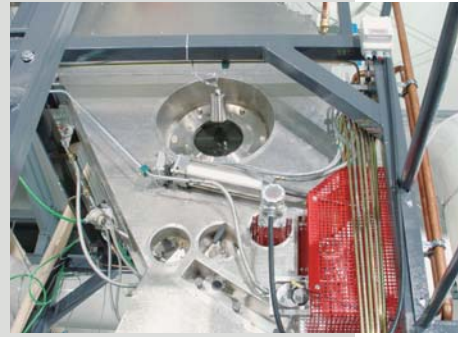

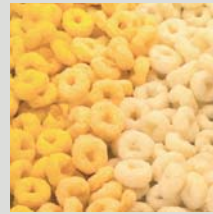

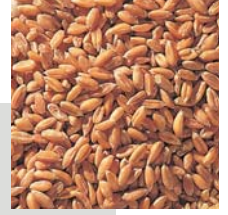

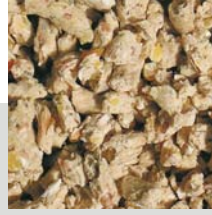

- Intensive preparation by means of product questionnaires and discussions with our customers
- Realisation of the tests by our application engineers
- Assistance to our customers by our sales staff
- Laboratory analyses
- Final discussion of the tests with the customer
- Detailed test report

For more information, please see our specific product sheets for the following industries:

- Chemistry and Pharmacy
- Food
- Coffee
- Biomass and Recycling
- Animal Feed and Petfood
